

the leader hook end. A sliding c-weight is connected to the leader. The c-weight has a first end having a first bore with an external slot on one side and a second end having a second bore with an external slot on the other side.

[0020] There has thus been outlined, rather broadly, the more important features of the embodiment of the invention in order that the detailed description thereof that follows may be better understood and in order that the present contribution to the art may be better appreciated.

[0021] The present embodiment of the invention may also include a horizontal unilateral three-pronged hook, a snap and a swivel. There are, of course, additional features of the present embodiment of the invention that will be described hereinafter and which will form the subject matter of the claims attached.

3. The first sentence of [0021] is deleted and paragraph [0019] is deleted from [0018] to [0021] in the following and additional changes are added:

#### **SUMMARY OF THE INVENTION**

[0018] In view of the foregoing disadvantages inherent in the known types of fishing tackle now present in the prior art, the present embodiment of the invention provides an improved bottom fish rig, and overcomes the above-mentioned disadvantages and drawbacks of the prior art. As such, the general purpose of the present embodiment of the invention, which will be described subsequently in greater detail, is to provide a new and improved bottom fish rig and method which has all the advantages of the prior art mentioned heretofore and many novel features that result in a bottom fish rig which is not anticipated, rendered obvious, suggested, or even implied by the prior art, either alone or in any combination thereof.

[[0019] To attain this, the present embodiment of the invention essentially comprises an elongated leader having a hook end and a line end. The hook end having a leader hook loop and the leader line end having a leader line loop. A first movement stop is frictionally connected to the leader. A second movement stop is frictionally connected to the leader. The second movement stop is located between the first movement stop and the leader hook end. A sliding c-weight is connected to the leader. The c-weight has a first end having a first bore with an external slot on one side and a second end having a second bore with an external slot on the other side.]]

**The prior art of record neither discloses nor fairly teaches the recited limitations of the claimed combination including, but not limited to: an elongated leader, a first stop, a second stop, a c-weight, a swivel, a snap and a horizontal unilateral 3-prong hook.**

[0020] There has thus been outlined, rather broadly, the more important features of the embodiment of the invention in order that the detailed description thereof that follows may be better understood and in order that the present contribution to the art may be better appreciated. [[0021] The present embodiment of the invention may also include a horizontal unilateral three-pronged hook, a snap and a swivel.] There are, of course, additional features of the present embodiment of the invention that will be described hereinafter and which will form the subject matter of the claims attached.
